GRADUATE ENGINEERS
Bring your ideas to life!

This could be the beginning of something larger than you ever imagined. As a world leader in a diverse range of technologies, we will expose you to our complex integrated system solutions and services that make industries the world-over safe, secure, energy efficient, innovative and productive. You could find yourself working at sites as diverse as oil rigs, mines, metal refineries, correctional facilities, hospitals and even casinos. That’s why if you’ve got big ideas and are passionate about bringing them to life, start your career with us.

Why Honeywell?
Because ordinary is boring - we know that as a new graduate, you're looking for a career that is far from ordinary. That’s why you’ll enjoy working with us at Honeywell.

In today’s competitive business environment, life is hectic enough for our customers without worrying about building management or process control systems. We help our customers manage their facilities and plants so they can focus on core issues in their business. We attract the highest calibre of people and provide an environment where they can do extraordinary things.

Using the latest technologies that focus on innovative solutions, new graduates will be trained and mentored so that you will enjoy dynamic career development and a team environment where challenge is part of daily life.

What career paths are available?
Honeywell recruits Project Engineer graduates for two different areas of the Automation and Control Solutions (ACS) business in Pacific.

Our work is often project-based. We look for graduates to work with our control systems in mainly a project management role. Some graduates will be more focussed on control system design and engineering. Our Project/Control Engineering graduates will be working within either the Honeywell Building Solutions (HBS) or Honeywell Process Solutions (HPS) areas.

Who is eligible to apply?
You need to be legally eligible for full-time employment in the Australia and/or New Zealand, and have completed a bachelor’s degree or are in their final year of University. Graduates from Electrical, Mechanical, Mechatronics, Software and Chemical disciplines with interest in automation and control systems are encouraged to apply.

What’s in it for me?
Honeywell has always believed investing in people, is investing in the organisation’s future. Our Honeywell Graduates are fundamental in building the organisation's capabilities and developing future technocrats and leaders.

With our cutting edge training and development programs, we’ll give you all the information, skills, tools and resources you need to succeed. We will work with you to plan your career path, and identify the professional training you will need for your current role and for your future development. And, one of the most valuable things we offer you is the opportunity to apply your knowledge in a hands-on, commercial environment. Right from the start, you’ll work on real projects, with real clients, giving you as much exposure as possible.

You will earn an attractive and competitive salary package, along with opportunity to work with an excellent team. With study assist, global opportunities, activities, clubs and more, we provide everything you need to work, learn and play.

Where will I work?
You will be selected by one of the offices across Australia and New Zealand. We have opportunities in NSW, ACT, SA, VIC, WA, QLD, TAS and Auckland.
